

FOR BUSINESSES

Analysis as the starting point.

Four concrete offers.

The starting point is usually the free AI assessment: we look together at where AI can genuinely help your business, then you decide which of the four paths fits. If you already know exactly what you need, you can also choose one of the four offers below directly.

THE STARTING POINT

AI Assessment: the foundation for everything that follows

60 minutes, remote, free of charge. We look at which tasks take up the most time at your company, are repetitive, or have the biggest leverage. To prepare, we gather information in advance via a questionnaire, run a short interview, and prioritize the results together with you. The outcome is a prioritized list: the foundation for each of the four paths below.

Claude Setup & Hosting

We set up Claude for your entire workday, with Cowork and Code, and connect it to your existing tools. We also clarify which path fits your data protection needs: Enterprise/Team or EU hosting via AWS Bedrock.

Website Migration

If your website still runs on WordPress or another CMS, every change quickly becomes a hassle. We rebuild it with Claude Code, so afterwards you can make adjustments yourself, no coding skills and no freelancers required. Hosted on Vercel.

Automations

We automate the specific tasks that cost the most time or have the biggest leverage, whether as a Claude Code automation, built with Cowork, or as a visual workflow via n8n or Make.

Software / App

For something completely new: your own app, internal tool, or software. Built independently of your existing stack, or connected directly to it.

The assessment is always the starting point. All four paths in detail on the following pages.

A FREE STARTING POINT

Free AI assessment. Followed by a targeted proposal.

● WHAT IS IT?

60 minutes, remote, free of charge. We look at which tasks take up the most time at your company, are repetitive, or have the biggest leverage. We gather information in advance via a questionnaire, run a short interview, and prioritize the results together.

● SCOPE

1

Taking Stock

Using a questionnaire and a short interview, we identify what still runs manually at your company today: emails, reports, proposals, data reconciliation between tools.

2

The Top Opportunities

3 to 5 concrete workflows, sorted by effort and benefit. For each one, an honest estimate of how much time or money is at stake.

3

Outcome

Together with you, we prioritize what can be implemented right away and what can wait, and put together a proposal on that basis. No obligation attached.

WHY IT MAKES SENSE

An honest assessment before anything gets built. Afterwards, you'll know which lever brings the most value instead of guessing. We assess your workflows, not a product we're trying to sell you.

COST

€0

The call, the analysis, and the prioritized list cost you nothing. If it turns out that nothing is worthwhile right now, we'll tell you that too.

Let's schedule your assessment.

Send us a short note about your industry and where the most time is currently being lost. We'll arrange a date together from there.

DATA PRIVACY, CLARIFIED

The strongest AI for your business.

How to use Claude securely.

WHAT IS IT?

We set up Claude for your entire workday, with Cowork and Code, and connect it to your existing tools so you can handle tasks efficiently with AI. We also clarify which path fits your data protection needs: Enterprise/Team or via AWS Bedrock.

OPTIONS

STANDARD CHOICE

Claude Enterprise / Team

From roughly €30 per user per month. The data processing agreement is automatically part of the commercial terms. Covers Article 28 GDPR obligations, EU Standard Contractual Clauses (Modules 2/3), and the UK IDTA. Data is processed in the US.

FOR STRICT EU REQUIREMENTS

Claude via AWS Bedrock

From roughly €120 per month (including the server infrastructure required for access). Runs in the EU regions of Frankfurt, Ireland, and Paris. Genuine EU data residency instead of a contractual assurance across the Atlantic.

Includes: the Claude Code setup (plan selection, team-wide CLI/desktop access, shared CLAUDE.md/AGENTS.md conventions, sensible permission defaults) as well as the integration with your existing tools: we install the right plugins, skills, and custom commands for your workflow.

WHY IT MAKES SENSE

The difference between the two paths is where your data is processed. Both can be set up GDPR-compliant. Important for anyone with data protection or compliance obligations.

COST

€1,500–3,000

You pay for the Claude license directly with Anthropic or AWS (see the options above). We bill our setup at our day rate of €1,500. For 1 to 10 employees, this usually takes 1 to 2 days, more for larger teams.

Let's schedule a short call.

Send us a short note on how sensitive your data is and what you're planning to do with Claude. We'll find the right path together in the call.

A REBUILD INSTEAD OF OUTDATED TECHNOLOGY

Your website, rebuilt with Claude Code. For easy updates and cool automations.

● WHAT IS IT?

If your website still runs on WordPress or another CMS, every change quickly becomes a hassle. We rebuild it completely, page by page, with Claude Code, using your content and your wording. Vercel handles deployment and hosting automatically with every change.

● SCOPE

ALWAYS INCLUDED

Claude Code Setup

The shared building block becomes the foundation of the website project: plan, access, conventions.

ALWAYS INCLUDED

Website Rebuild & Hosting

Claude Code builds the website with your content. Hosted on Vercel, one of the most modern hosting platforms, which deploys automatically with every change.

OPTIONAL

Admin Panel

Your own panel for content management or custom reporting, so you're not waiting on us for every small thing.

OPTIONAL

Ongoing Support

A service agreement for the time after launch: updates, support, further development.

WHY IT MAKES SENSE

Because Claude Code builds the website, you can adjust it yourself afterwards: text, images, small changes, no coding skills and no freelancer needed for every little thing.

COST

Custom

Our day rate is €1,500. The effort depends on the scope of your website, more pages and features mean more time and higher token costs for the AI-assisted development. This is based on a free analysis of your current website.

Let's take a look at your website.

Send us a short note on what your current website looks like and what should be new. We'll assess the scope together, then you'll get a proposal.

TASKS THAT RUN THEMSELVES

Automate your tasks. Via Claude Code or automation tools.

WHAT IS IT?

We automate the specific tasks that cost you the most time or have the biggest leverage, whether as code or as a visual workflow. Two paths, each selectable independently. Optionally, we can also build you an Agentic OS to monitor and control all your workflows.

Recommendation: start with the free AI assessment

Before choosing a path, it's worth doing a free AI assessment: together we'll find out which task is most worthwhile and which path fits it best.

OPTIONS

FOR MOST TASKS

Claude Code

Claude Code builds the automation as code and then runs it itself: for recurring reports, data reconciliation, research routines. The starting point is the shared Claude Code setup building block.

FOR COMPLEX TASKS

n8n, Make, Zapier

An n8n, Make, or Zapier instance is set up for you and connected to your existing tools: CRM, email, spreadsheets, interfaces. Via a visual workflow, no one on your team needs to code.

Also: We also build some automations directly with Cowork, without any separate automation tool. Optionally, we can add an Agentic OS for monitoring and control.

WHY IT MAKES SENSE

We automate the time-wasters so you have more time for what matters. You can then adjust your processes and automations yourself, no prior knowledge required.

COST

Custom

Our day rate is €1,500. How many days it takes depends on the task and the path chosen. We'll clarify that together in conversation before anything gets built.

Let's schedule a short call.

Send us a short note on which task should run on its own in the future. We strongly recommend doing a free AI assessment first, then we'll find the right path together.

SOMETHING COMPLETELY NEW

Build a new product.

App, tool, or your own software.

● WHAT IS IT?

You have an app idea or want to offer your own software, but don't know how to build it. First, we look at existing SaaS solutions, which are often the smarter choice since you don't have to run them yourself. If none fit, we build you a completely new digital product with AI-assisted development, and show you how to run it independently going forward.

Includes: The shared Claude Code setup becomes the foundation of the project: plan, access, conventions.

● SCOPE

ALWAYS INCLUDED

Idea & Scope

Together we sharpen what the product needs to do and who it's built for.

ALWAYS INCLUDED

Build & Launch

AI-assisted development, web, mobile, or both, depending on what the product needs, launch included.

OPTIONAL

Ongoing Operations

After launch, continued support remains an option: hosting, monitoring, further development available as an add-on.

WHY IT MAKES SENSE

External tools sometimes don't meet your specific requirements. We build you your own tool, tailored to exactly what you need.

COST

Custom

Our day rate is €1,500. How many days it takes depends on scope and tech stack. After the idea phase, you'll get a clear proposal.

A short call to clarify the scope.

Send us a short note on what you want to build and for whom. We'll clarify scope and tech stack together from there.
